Temperatures that exceed Specific Water Quality Criteria in Chapter 93 of Title 25 of the PA Code are shown in red. SpC is specific conductance. DO is dissolved oxygen. ORP is oxidation reduction potential. COND is conductivity. TDS is total dissolved solids. Refer to Sampling and Analysis Plan under Phase I study results for quality assurance/quality control information.

If the number of sample results where the analytical parameter was not detected exceeded 20% of the sample pool, they were not included in the calculated watershed average. If the number of non-detect samples was less than 20% of the sample pool, ½ of the detection limit was used to represent those samples in the calculated watershed average. Refer to Sampling and Analysis Plan under Phase I of study results for quality assurance/quality control information.

**BENTHIC MACROINVERTEBRATES:**

**This site was added through the generosity of the Monroe County Planning Commission in 2003 for the first time. The score of 31 was considered “Optimal” and the site has not been resurveyed.**

The range 35 - 29 is considered optimal. The range 28 - 14 is the slightly to moderately impaired category, and any site with a total score of less than 14 is considered severely impaired.

\* DEHOCR02 is equivalent to DEHOCR03 in the Monroe County Water Quality Study in 2003.

**HABITAT ANALYSIS 2003**

DEHOCR03	208	Optimal	Greater than 50% mix of boulder, cobble, submerged logs or other stable habitat. All four velocity/depth regimes present. Occurrence of riffles frequent.
